

Plastic Badges

Plastic name badges are very popular and have stood the test of time. Some are made of 2-ply plastic where your logo is printed then personalized by engraving. The top surface color is cut through by rotary or laser engraving to show the second color of plastic. Other plastic badges feature both the logo and personalization printed, allowing for any look you want. All plastic badges include a jeweler's pin.

These badges are available in almost unlimited choice of colors, sizes and shapes. The most common options include a magnetic backing, executive frames and polyurethane doming.

Remember to account for your future needs and utilize our Premier Online Badge Release Program at badgeworkhouse.com. Look to the catalog or website for additional information about this program.
